Study Title: Stanford Medicine Research Registry

1. What will happen to me in this study?
   Our Research Registry connects people like you with teams conducting research to make improve health care and well-being. If you are eligible for a study, researchers may contact you to provide additional details on how to participate. All that you will need to do is fill out a form with some questions which should take no more than 10 minutes. **Filling out this form does not mean you have to be a research participant and you do not have to answer any question on the form you don’t want to.**

2. Can anything bad happen to me?
   In the event of a data breach the health information you provide to the registry could be viewed by someone else. To protect against this, your data is securely stored according to Stanford regulations.

3. Can anything good happen to me?
   You will be included in a database that will allow you to be contacted about current or future clinical trials and research studies that you may be interested in. The findings that come from research you participate in may help future patients in all different medical fields.

4. Will anyone know I am in the study?
   Your participation in this study will be kept a confidential and only select Stanford researchers will be aware of your involvement.

5. Who can I talk to about the study?
   If you have any questions about the study or any problems to do with the study you can contact the Protocol Director Karl Sylvester, MD. You can call him at (650) 497-3612. You can also call the Registry Manager, Katherine Connors at (650) 725-5162.

   If you have questions about the study but want to talk to someone else who is not a part of the study, you can call the Stanford Institutional Review Board (IRB) at (650) 723-5244 or toll free at 1-866-680-2906.

6. What if I do not want to do this?
   You can stop being in the study at any time without getting in trouble and your doctor will continue to treat you if treatment is necessary and available. You can remove yourself from the study using the unsubscribe link or by notifying Dr. Karl Sylvester at any time.
